

## Turtle Pro 60/90/120

**Reptile One**

### Setting up the terrarium

1. Read and follow all safety instructions before using this terrarium.
2. Consider the position of the terrarium, avoid direct sunlight and areas of varying temperatures such as in front of heaters or air conditioners.
3. Ensure any gravel being used has been washed. When adding gravel to the terrarium, DO NOT pour the gravel in, add it by scooping into the bottom of the terrarium to avoid damaging the glass.
4. Attach the supplied filter to the back of the terrarium. This filter will fit through the gap in the background. Follow the instructions that are provided with the filter.
5. Fill the aquarium up to approximately 1/2 way up the turtle dock, this level will allow turtles to easily climb out of the water. When adding water to the terrarium use Reptile One Water Conditioner to remove chlorine and chloramine from the tap water.
6. Seek advice from your Reptile One retailer on how and when to stock your terrarium.

### Care & Maintenance

It is important to remember that due to the feeding behaviour of turtles regular gravel cleaning with a Reptile One Gravel Cleaner will help to maintain good water quality. A Reptile One Magnet Glass Cleaner can be used to keep the sides of the terrarium clean.

Always ensure the water is kept at the correct level to allow the turtle climb out of the water and to keep the filter running correctly.

**For Guarantee Conditions, please refer to the Guarantee form included with this terrarium.**
