

The Reptile One Terrarium is designed to provide maximum functionality when housing reptiles. The construction materials used offer ease of cleaning and maintenance whilst still providing a durable and safe enclosure.

The Reptile One Terrarium is complete with securable glass sliding doors for access and removal of animals and stainless steel mesh panels used for ventilation.

Attach the side of the magnet lock with the adhesive tape to the rear door in the desired location as shown.

To secure the doors once closed, place the opposing side of the magnet lock on the front door in the corresponding position.

This Terrarium can be used to create either a wet or dry environment, depending on the requirements of your animal. When using as a wet environment, water can be directly introduced into the base of the Terrarium to a maximum depth of 5cm.

Find a suitable location for your Terrarium on a flat surface such as on a Reptile One Reptile Enclosure Cabinet. If using as a wet environment, place a 10mm thick foam sheet beneath the Terrarium before filling with water.

CAUTION:

When locating or relocating the Terrarium, always ensure that you carry the Reptarium holding the base.

Always ensure that your animal's basic needs of; fresh food, fresh water, warmth and environmental conditions are met.

Parental guidance is recommended when children are using the Terrarium.

Cleaning and Maintenance:

Always keep the Terrarium clean to avoid causing distress and disease to the animals.
